CAT® SIMULATORS

Best UX: Integrate 3 Elements

Get the best user experience with Cat® Simulators by integrating three different digital elements into your heavy equipment program. Find out how they can work together.

Ask for a demo!

SIMULATORS + SIMU CAMPUS + CURRICULUM

SimU Campus™

In addition to a hands-on learning experience, each simulator includes a program that records and reports all user session results when the user is logged into SimU Campus. Each simulator measures users on hundreds of benchmarks, then saves the results to the simulator's computer database to track users' progress.

Cat® Simulators Support

We offer exclusive support materials to our customers at support.catsimulators.com; troubleshooting, how-to videos, and more for each simulator model.

SimScholars®

SimScholars online curriculums at simscholars.com provide a blended learnin experience with a one-to-one connection to each simulator model.

With content based on the machine, environment or industry, the curriculums step out each exercise for learners to build skills for leveled learning development and can be used in the classroom or anywhere an internet connection is available.

The turnkey solution provides instructor guides, schedules, lessons, quizzes, tests, step-by-step videos and more. The system saves all test results to track user completion
